RE: METALON PRODUCTS

TO ALL INTERESTED USERS:

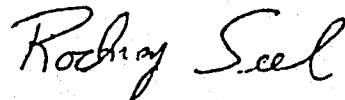

In the past year I have experimented with METALON PRODUCTS and have found them to be very significant in performance.

Here are a few examples of my success with METALON PRODUCTS.

- 1) International Log Loader - was having constant Hydraulic pump failures - 6 month life. With the installation of 2 New Pumps and adding Metalon H, I have run approximately 1 year and pumps are still operating at 100%.
- 2) I added Metalon H in a Drott 40 Feller Buncher. The operator has reported back that pumps are running quieter and that the Hydraulic motion seems easier and smoother. Also, that there seems to be an increase in track drive as well as cooler Hydraulic temperature.
- 3) Morbark Rosser Head Debarker - was having failures of cutting head bearings, life ranged from 2 days to 3 months. With the use of Metalon Hi-Tech 1.5 Grease, life has extended to 6 months plus. I am very impressed with this grease and have been using it on all bearings on this machine.

My experiences with Metalon Products have been very positive. I am at present using these Metalon Products; Hi-Tech 1.5 Grease, Metalon H, Metalon M and Megasel Diesel Fuel System Treatment in all our equipment.

Yours truly,

Maintenance Supervisor
