Mr. Vic Hodges
Metalon Products

Dear Vic,

Just a short note to you regarding your Metalon Products.

As you know we have been using your grease and Megasel Fuel Treatment for two years now and have had very good luck with them.

We started using both Metalon M in our engine, and Metalon C2 in our transmission and differentials. We have been using both of these products for about 8 months now and only recently realized the value of Metalon.

On September 2, 1994 while returning home from Lewiston Idaho, we had an idler pulley break on the engine causing the water pump to stop and the engine temperature to climb to over 250° before we were able to get off the highway and shut the truck down. We lost several gallons of coolant, and the engine oil turned instantly black and smelled burned.

It is my belief that without the Metalon M in the engine we would have lost the engine due to extreme temperature. That loss could well have been in the area of \$10,000 plus down time.

Because of your product I believe that we were able to repair the water pump idler pulley and fan belt and continue on working.

I would not hesitate to recommend Metalon to anyone, based on our experience with it.

Thank you for a fantastic product and your service to us.

Yours Truly
Jimcon Trucking

Jim Edwards
