Dear Vic;

Further to our conversation regarding the use of Metalon Grease.

We have two Ag-Chem Terragators, model # 1664T and 1844 that have remote hydraulic pumps. They are driven by a long drive shaft and supported by two bearings.

We would have to replace these bearings yearly, at a cost of \$1000.00 each. We started using Metalon grease three years ago and have not had one of these bearings fail to date.

Needless to say the savings have been very significant.

Yours truly,

David Harper
